

ONE PLATFORM · FOUR PROGRAMMES · NEW: AI GOVERNANCE

AI is moving faster than your ability to govern it.

Every new use case, every new AI vendor, every model quietly embedded into a live process widens the gap between what your business is doing with AI and what you can actually evidence to a board or a regulator. **PrivIQ closes that gap — extending the platform you already trust for privacy and third-party risk into a structured, defensible AI Governance programme.**

Board-level exposure

Boards now carry fiduciary duty for ethical AI oversight — ahead of most teams' ability to demonstrate it.

An enforcement wave is closing in

Regulators and sector-specific rules are catching up to full-scale AI use faster than compliance functions can staff for it.

A widening skills vacuum

Demand for AI governance expertise far outstrips supply. Usage is widespread; controls are not — yet.

BUILT ON THE NIST AI RISK MANAGEMENT FRAMEWORK

GOVERN

Culture, policy and resourcing for AI risk management.

MAP

Context and specific risk of each AI system, before deployment.

MEASURE

Quantitative and qualitative analysis of the risk that's mapped.

MANAGE

Prioritise and act to minimise negative impact — and prove it.

WHAT IT GIVES YOU BACK

Time back for a team that's stretched thin

Technology should be the enabler, not another burden on a function that's already snowed under. PrivIQ automates the manual evidence-gathering and admin work, driving efficiency and giving your team back the time to focus on judgement — while giving you far greater visibility into where the risk actually sits.

Audit-ready, on demand

Governance means accountability. Every policy, control and decision is evidence-backed and timestamped, so when the regulator comes knocking you can show — instantly — that you're aware, aligned and in control, with your principles and obligations mapped to the relevant framework or regulation, including emerging approaches like the EU AI Act.

ONE PLATFORM. FOUR PROGRAMMES. Add a programme when you're ready — every one shares the same engine, evidence and reporting.

Privacy Compliance

Data mapping, ROPA, DSARs, breach response, consent, policies & reporting.

AI Governance — new

Govern, Map, Measure, Manage. NIST AI RMF built into the product.

Third-Party Risk

Classify, assess, evidence and reassess vendors — including AI vendors.

GRC & Operational Risk

Tailored frameworks for operational risk, on the same engine.
