

THE PRIVIQ PLATFORM • ONE ENGINE • FOUR PROGRAMMES

The risk is shared. The tools rarely are.

Privacy usually sits with legal or compliance. AI governance might sit there too, with IT, or with a governance function all its own. Operational risk can span a dozen registers and owners across the business. However your organisation draws those lines, the underlying data, vendors and board are the same — and run on disconnected tools, nobody sees the whole picture. **PrivIQ puts all four on one configurable engine, however the ownership is split — shared evidence, shared reporting, and one place to prove you're in control.**

THE FOUR PROGRAMMES

AI GOVERNANCE

AI deployment is outpacing most teams' ability to govern it. NIST AI RMF built in — Govern, Map, Measure, Manage — so every AI use case is evidenced, not just approved.

PRIVACY COMPLIANCE

Twelve-plus regulations, all moving at once. Data mapping, governance, risk assessments, DSAR and breach response — GDPR, UK GDPR, POPIA and more, on one system.

THIRD-PARTY RISK

Your risk sits in someone else's system. One register, one classification model — privacy, AI, cyber, supply chain and ESG risk, across every vendor.

GRC & OPERATIONAL RISK

Risk assessments shouldn't take weeks to write. Describe the risk in plain language and AI drafts the assessment — controls, policies and audit, tailored to your programme.

WHY ONE PLATFORM BEATS FOUR POINT SOLUTIONS

Shared engine

Add a programme when you're ready — same configuration model, same control library, same AI assistance throughout.

Shared evidence

A processor record, a risk score, a policy acknowledgement — captured once, reused everywhere it's relevant.

Shared reporting

One dashboard for the board, not four exports stitched together the night before the meeting.

AI - ASSISTED • HUMAN - VERIFIED • AUDIT READY

PrivIQ gives GRC, privacy, security and risk teams one platform to prove they're in control — across AI, data, vendors and operations.

Ready to bring AI, privacy, third-party and operational risk onto one platform?
