

ONE PLATFORM • FOUR PROGRAMMES • THIRD-PARTY RISK MANAGEMENT

Your risk sits in someone else's system.

Processors, SaaS platforms, contractors — and now AI vendors and AI features quietly embedded in tools you already bought. You're accountable for all of it, whether the record lives in eleven spreadsheets or nowhere at all. **PrivIQ closes that gap — one register and one classification model covering privacy, AI, cyber, supply chain and ESG risk across every third party, built to prove your due diligence, not just start it.**

The AI you didn't know you'd bought

AI features get quietly embedded in tools you already approved — most third-party risk programmes were built before that was even possible.

Evidence that doesn't survive a handover

When the person who managed a vendor relationship leaves, the due diligence often leaves with them — spreadsheets don't inherit context.

One relationship, eleven spreadsheets

Privacy risk in one tracker, AI risk in another, cyber and ESG somewhere else — nobody sees the whole relationship at once.

THE FULL THIRD-PARTY LIFECYCLE, IN ONE ENGINE

REGISTER

One structured record for every supplier, processor, contractor and AI vendor.

CLASSIFICATION

Risk-based, by data access, operational importance, service type, geography and AI involvement.

DUE DILIGENCE

Questionnaires and evidence sized to the classification — not one form for everyone.

MONITOR & REASSESS

Remediation with an owner and due date, and periodic reassessment on a cadence.

WHAT IT GIVES YOU BACK

Time back from chasing vendors by email

Assign a due diligence stage directly to the third party itself — they complete their section, you keep the trail, and nobody's stuck forwarding spreadsheets between departments.

One score, every third party

Privacy, AI, cyber, supply chain and ESG risk all roll into the same severity-and-likelihood scoring model — so your board sees one consolidated risk picture, not six disconnected trackers.

ONE PLATFORM. FOUR PROGRAMMES. Add a programme when you're ready — every one shares the same engine, evidence and reporting.

Third-Party Risk

One register — privacy, AI, cyber, supply chain and ESG risk across every vendor.

Privacy Compliance

Data mapping, ROPA, DSARs, breach response, consent, policies & reporting.

AI Governance

Govern, Map, Measure, Manage. NIST AI RMF built into the product.

GRC & Operational Risk

Tailorable controls, policies, risk assessments and audit — across GRC, HSSE, Operational, EIA and Cyber-Security.
